On this worksheet, you will be given graphs with one axis labeled. Your task is to label the other axis in a way that makes sense given the data in the graph. Write two potential labels for each, and be creative! The goal is just to spend time thinking about how variables can vary together. A small grade-related prize may be given to the group with our favorite label.

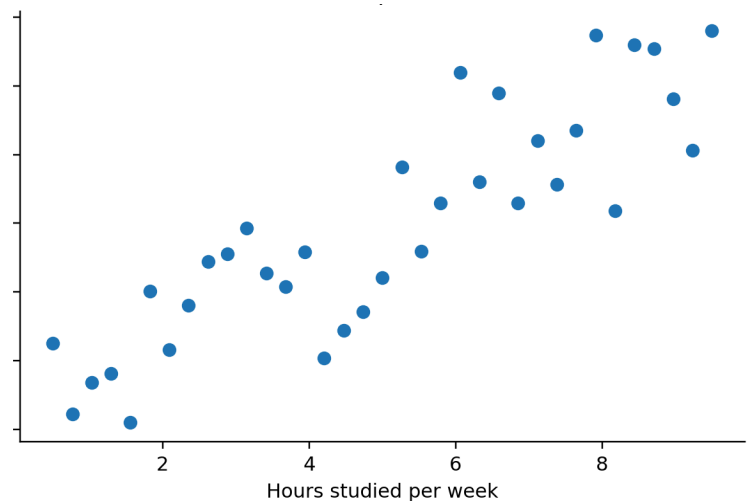

Here is an example of a graph with an unlabeled axis (right) and some label ideas (left):

1. Surface area of furniture with no fur on it
2. Minutes of uninterrupted personal space per day

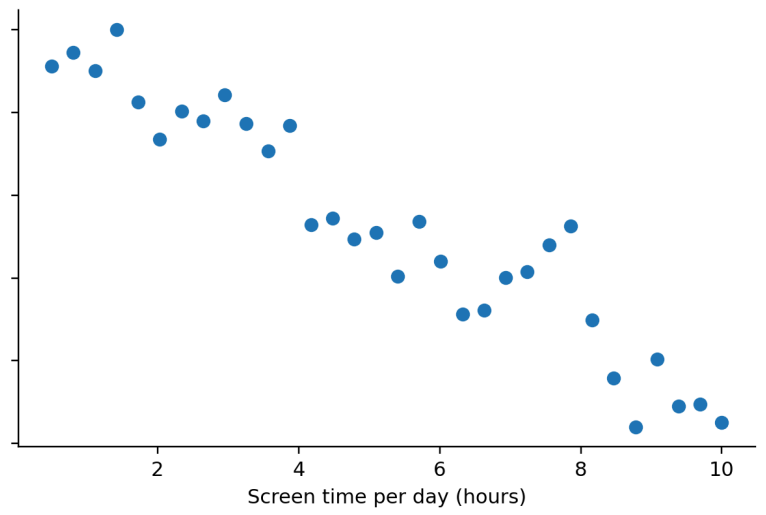

1.

2.

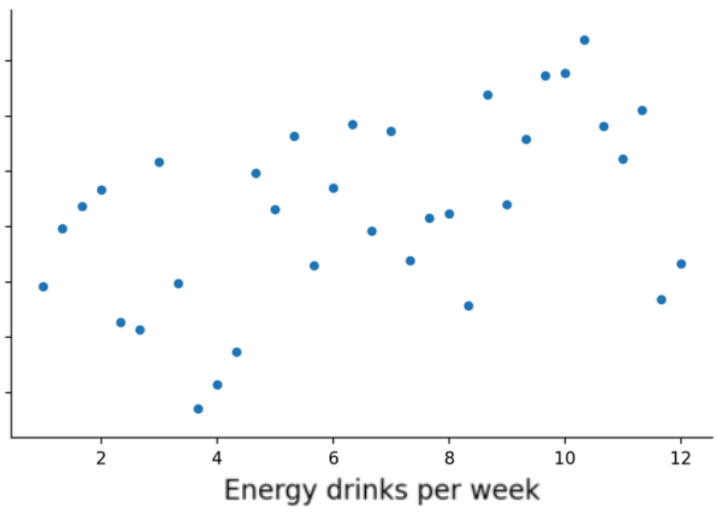

1.

2.
